- Blockchain

## PROJECTS

### Pikkup |

#### Full Stack | Live & Deployed on PlayStore

It is an android app that was built for local logistics network.

*This project was built for Antman Consultants and is currently in commercial use and is available to download at the PlayStore.*

### e-Certify |

#### Blockchain | Node | React.js

It is a blockchain based project for online certificate validation.

The major problem of counterfeit certificates can be tackled with the help of E-Certify, as it provides a solution to preserve the genuineness of a certificate. The entire process works on the blockchain in partnership with the IPFS (to provide data security).

*This Project was made at SIH 2019 Finals*

### Freehand.ml |

#### Machine Learning | Python | Flask

It is a machine learning based project for generation of front-end code of a web app only by using hand drawn images or sketches. It serves as a great platform for absolute beginners to generate the front-end code for their very own website.

### SnapSafe |

#### TfJS | React Native | Android

It is an android app built for smart parenting. It functions as a camera app that runs indecent content detection in real time using Machine Learning.

*This project was built under the guidance of Mr. Rakshit Tandon and Gurugram Police Cyber Cell.*
